The Grand Challenge Scholars Program is a prestigious and nationally recognized program originally created by the National Academies to prepare engineering and science students with the knowledge and skills necessary to address international concerns in the 21st century.

The program challenges students to create innovative and inter-disciplinary solutions to these designated problems through a personally planned curriculum focusing on both the chosen challenge and the 5 elements of the GCSP:

- Research Experience
- Interdisciplinary Curriculum (6 Credit Hours)
- Entrepreneurship (3 Credit Hours)
- Global Dimension (Study Abroad or 6 Credit Hours)
- Service Learning

Upon completion of this program during their senior year, students will not only be well-rounded engineering graduates, but will also have a designation on their diploma and transcript from the National Academy of Engineering signifying their status as Grand Challenge Scholars. The final submission of a GCSP portfolio in the final year outlining how the students achieved their original goal marks the completion of the GCSP. Both professional organizations and graduate institutions recognize this achievement in academia and appreciate the perspective it gives its members.

At their Graduation, students will get special recognition for this achievement and get special regalia to wear during the ceremony to showcase this achievement.

The National Academy of Engineering endorses the NAE Grand Challenge Scholars Program. Engineering skills and leadership are essential to meeting the great challenges facing humankind. This program will build a cadre of young men and women who not only have the necessary engineering skills but also the cross-disciplinary knowledge, entrepreneurial spirit, global perspective and sense of mission needed to serve and lead this country.

Charles Vest, President
National Academy of Engineering
14 KEY CHALLENGES

Provide Energy from Fusion
Make Solar Energy Economical
Manage the Nitrogen Cycle
Restore and Improve Urban Infrastructure
Develop Carbon Sequestration Methods
Provide Access to Clean Water
Prevent Nuclear Terror
Engineer Better Medicines
Enhance Virtual Reality
Secure Cyberspace
Reverse-Engineer the Brain
Advance Health Informatics
Advance Personalized Learning
Engineer the Tools of Scientific Discovery

Starting the Grand Challenge Scholars Program:

1. Be an engineering student at the sophomore level with 30 semester hours completed in a program of study and cumulative GPA of 3.0 or higher.
2. Build a GCSP Plan of Study and Research Plan with Faculty Mentor and have it approved by GCSP Director and Steering Committee.

Plan of Study Available on GCSP Webpage at parks.slu.edu
